ADaM Reboot

I. Purpose:

This procedure is used when TWP instructs the Observers to reboot the ADaM. This procedure is usually used when there are multiple instruments not reporting or other ADaM troubleshooting methods are not working.

II. Cautions and Hazards:

- All of these steps will reboot ADaM. The first two can be used on Eve. The third can't because the ADaM software isn't running on Eve

III. Requirements:

None.

IV. Procedure:

A. Steps:

1. Go to the ADaM in the D-Van and the ADaM keyboard. ADaM should be at the prompt @adam1% at Manus, or @adam2% at Nauru.
2. TYPE `su` then press return. It should ask you for the password.
3. TYPE `pa55word` It should show a # prompt.

First Method: (preferred for Observers)

4. TYPE `init 6`

OR

Second: (preferred for Observers)

Type `reboot` then press return.

OR

Third method: (on ADaM only-will not work for EVE)

Click on "Reboot" square at top right hand corner of ADaM's monitor screen.

- It will ask for a password

5. TYPE `rain.ok` then press return. The ADaM should shut down.
